

EXPERT-TÜNKERS EDX Series

Overview

X – Fixed Partition Series

Standard rotary tables and trunnion drives with fixed indexing positions and maximum torque in very compact design.

Available Sizes:

EDX 410
EDX 465
EDX 500
EDX 610
EDX 700
EDX 810
EDX 960
EDX 1170
EDX 1370
EDX 1600

Multi-cam-follower design – Higher torque output

With the EDX series there are always at least two cam followers engaged which provide for the force transmission from the cam to the rotary table within the range of acceleration and deceleration.

- In case of an emergency stop all forces are allocated to several cam followers.
- Higher torques can be transmitted on the basis of the same design.

Maintenance friendly cam followers

Overloading rotary index drives, for instance, due to a crash or maloperation can cause damage to the cam followers.

The EXPERT-TÜNKERS design allows for easy and quick replacement of the cam followers from the top – even when the table is blocked.

Overview of technical advantages

Solid, closed and plane table top plate with large mounting surface

Easy maintenance or exchange of cam followers from the top – no tooling removal required.

Minimum play in working position due to grooved cam principle and multi cam follower engagement

Maximum centre space for media supply

Large bearing on the outer diameter

TURNING

Fixed-partition rotary table

Flexible Index drive

Double cam rotary table

Index drive turning device

Rotating station

Drum drive with staking unit

Ring buffer

Cross conveyor

LIFTING & CONVEYING

Eccentric lift

Lifting/lowering conveyor

Skid buffer

Lift-and-rotate unit

Level lifter

Lifting columns

Rotating/lifting unit

Duorail-Lift-Shuttle

Lift & Shift/Shuttle System

Roller conveyor

LIFTING

7th axis

CONVEYING
